Evaluation of Hearing Disorders & Dizziness • Auditory & Vestibular Electrophysiology • Hearing Aid Dispensing

VENG TEST INSTRUCTIONS

An appointment has been made for you to have an VENG (Videonystagmography) test. This is a test of the vestibular system to assess dizziness and balance.

Time: _____ **Date:** _____

Certain medications may affect the results of this test. In order to prevent this from happening, we ask that you not to take any of the following medications for 1 day before your appointment:

Alcoholic beverages

Antihistamines

Anti-dizzy pills (Antivert, Meclazine, Bonine)

Muscle Relaxers

Narcotic Pain Medication

***** Do not discontinue any other medications without consulting your doctor *****

NO EATING for (4) hours before the test. If you must eat something, keep it small.

Please continue any medications you have been on for over six months of time.

You may drink non-alcoholic, non-caffeinated beverages up to 2 hours before your test

No Eye-Makeup, please.

If you have blood sugar issues (i.e. diabetes, etc), please eat a light snack if needed.

The test is a simple, painless procedure lasting approximately 1 hour. Cool and warm air will be placed in your ears which may make you a little dizzy. This sensation will only last a minute or two.

Please dress comfortably. Women should refrain from wearing eye-makeup and may want to wear slacks.

IMPORTANT BILLING INFORMATION: We request payment in full at the time of testing unless you are covered by Medicare or by an insurance plan. For your convenience, we accept VISA, Discover and MasterCard. If this is not possible, please contact our office prior to your appointment to make arrangements.

If a hearing test has been recommended as part of your evaluation, that charge is separate and may vary in cost according to which procedures are done.

This procedure is a diagnostic test and is usually covered by most health insurance plans.
